

**not attacker(success[]) in process 0.**

**GOAL**  
**attacker(success[])**

[clause 18]  
then the message success[] may be sent to the  
attacker at output {3}  
=> attacker(success[])

premise (input {1})  
If the message enc(nonce[],sk[]) is received  
from the attacker at input {1}  
attacker(enc(nonce[],sk[]))

[clause 22]  
then the message enc(x\_4,sk[]) may be sent to  
the attacker at output {12}  
=> attacker(enc(nonce[],sk[]))

premise (input {10})  
the message secretcondition[] is received  
from the attacker at input {10}  
attacker(secretcondition[])

[clause 21]  
The message secretcondition[] may be sent to  
the attacker at output {8}.  
=> attacker(secretcondition[])

premise (input {9})  
If the message x\_4 is received from the  
attacker at input {9}  
attacker(nonce[])

[clause 24]  
The message nonce[] may be sent to the  
attacker at output {17}.  
=> attacker(nonce[])
